

Latin American Fund

August 2019: Fund Factsheet

Fund Objective

The investment objective of the Brown Advisory Latin American Fund is to achieve capital growth by investing in a concentrated portfolio of high-quality Latin American growth companies. The Fund seeks high absolute returns over the long term and minimises the level of long-term risk by choosing well-capitalised, high-quality investments at reasonable valuations.

Managers' Strategy

Our investment strategy is to select private sector companies with long growth runways, aligned managers, solid competitive positions, high returns on capital, and strong balance sheets. We focus on companies that can grow in almost any economic environment and that can fund most of their growth with internally-generated cash, which we believe benefits shareholders more than growing by issuing shares or excessive debt. We typically invest in the best managed companies in an under-penetrated industry that is likely to outgrow nominal GDP. We aim to purchase these companies at reasonable valuations and hold them for the long term. We do not invest against an index and we do not invest in commodity companies or state-owned companies. We focus on 6 Latin American countries where governance and policy are improving over time and converging on developed-world norms. We believe this reduces the long term structural risk of the fund although these macro improvements often follow a "two steps forward, one step back" pattern. We believe that this strategy will produce high absolute compounded returns over time. Our current portfolio has compounded at a double digit earnings per share over the last 10 years, and we believe that similar mid-teens growth should be sustainable over the next 10 years. We also believe that the currencies of the countries we invest in are attractively valued today.

Our goal and expectation is that the earnings per share growth of the underlying holdings should be reflected in the NAV of the fund over time, but as long-term investors we do not hedge the strategy and investors should expect high levels of volatility in our short-term performance.
